Analysing Patterns of Gender-Based Violence in India: Insights from NCRB Data– 2020

Dr. Abhinandan Singh Dandotiya¹, Ms. Apeksha Gupta², Ms. Kajal Pachori³

¹Assistant Professor, ^{2,3}PG Students Department of computer science and engineering, ITM Gwalior, MP, INDIA

Abstract: *Women hold a significant and esteemed status in Indian society. The Vedas revered women as "DEVI" goddesses, extolling their qualities as mothers, creators, and givers of life. However, their exaltation was a little imaginary, since women in our patriarchal society in India were completely suppressed and subordinated at the same time. Because society insisted on holding fast to traditional ideas, Indian women across the nation continued to be subjugated and oppressed. This was the case for domestic as well as public, physical, emotional, and mental abuse. This Research analyse the reports and articles on crime against women in detail. The United States and its territories' National Crime Records Bureau (NCRB) Report-2020 has been examined.*

Keywords: *Women, Mythical, Subjugated, Crime, Violence, Power BI, Python*

I. INTRODUCTION

These days, women have evolved into Sex objects are frequently viewed by males as interior in a variety of contexts. Wife abuse and unmarried girl torture are common in the ruling territories. Due to the enormous sums of money needed for their weddings, they are seen as a burden on the family. In general, girls are discouraged from pursuing middle- or higher-level education. There is a great deal of prejudice against women in the field of education, and one area where this gender bias is blamed is in the belief that females belong in the home. Women's campaigns opposing rape laws have been compared to the Nirbhaya Case in India.[1] As a result of the Women's Organisations movement, numerous regulations are being created and amended. It shifted popular perception to support women. Domestic abuse, rape, and dowry cases are a few areas where crimes against women predominate [2]. Given the role of women in India, crime against them is extremely important. Internationally, indices that reflect the position of women in our countries are widely utilised [3][4]. The statistics provided by the crime-related data allow for an interregional comparison of crimes committed against women.

The National Crime Records Bureau compiles police station records nationwide and publishes data on crime against women in India each year. The data pertains to both reported and registered crimes against women [5-6]. This study is limited to a statistical examination of data on crimes against women at the state and district levels that the NCRB, India, has produced.

II. LITERATURE REVIEW

Numerous studies have been conducted on a range of topics regarding crime in India in 2020, including targeted crime, crime as a whole, crime deterrent, and the necessity of changes. Names like Dreze and Khera (2000), Mukherjee, Rustagi and Krishnaji (2001), Shaban (2008), Dutta and Husain (2009), Bhatt and Pant (2011), Nagarajan and Sheriff (2012), Prashad (2013), Sharma (2012), Chaudhary (2013), Nagindrappa and M.K (2013), D'costa (2013), Bharadwaj (2014), Wani (2014), Iyer and Topalova (2014), Satija and Dutta (2015), Malik (2016), Kaur and Singh (2017), and so on should be mentioned in this context. The primary focus of these studies was All India. However, there are almost no state-level studies in the literature. This study follows in the footsteps of previous research conducted in India[7-10]. This study differs from previous ones in that it examines all states and union territories and attempts to determine each state's relative standing in relation to all of India. The current paper also makes an effort to identify the fundamental causes of crime against women. In order to close this gap in the body of literature, the current study is an attempt. This paper aims to fill this research gap by examining three main areas of crime against women:

- 1) Examining the patterns of three main types of crimes: dower-related offences, rape and attempt-to-commit offences, and other crimes against women
- 2) Evaluating each state's status in respect to India as a whole in reference to the three categories of crime against women
- 3) Determining possible methods of mitigation.

Meaning of Crime

According to the UN, violence against women is defined as any act of gender-based violence, including threats of such actions, that causes physical, sexual, or mental harm to women or is likely to do so.

III. PROPOSED METHODOLOGY

The National Crime Record Bureau [11] is the source of all the information the researcher cited in this study report. Information regarding crimes, including those reported in 2020, is obtained by the NCRB. The NCRB tracks crimes involving violence against women, including as acid assaults, kidnapping and abduction of women for forced marriage, sexual harassment, dowry deaths, and rape [12]. Rather than providing a subjective reality, this research will analyse the statistical report of crimes against women. Numerous facets of crime against women in various States and UTs will be examined in this paper. The information gathered for this article comes from secondary sources.

Data

Annual reports on various forms of crime against women in India, compiled from police files by the NCRB, have been released since 1953. The NCRB has been collecting data on rapes that do not qualify as murders since 1971. Data under other crime heads, which have just recently been added to the crime list since 1995, include dowry deaths, molestation, and sexual harassment [8].

IV. RESULTS AND DISCUSSIONS

1) India's NCRB Report on Crime Against Women, 2020

According to data on crimes against women at the national level, which is mostly provided by the NCRB, levels of violence against women are quite high in several regions of India. These include, but are not limited to, dowry deaths, rapes, acid attacks, sexual harassment, cybercrimes, abductions of women, and trafficking. The statistics presented in the table below indicates that these crimes are still on the rise annually.

Sl. No	Crime against women	No of Crime against Women in 2018	\

Table 1: Crime against Women in India 2018-2020

Figure 1: All India 2020 Crime against Women

Based on data from the NCRB Repost-2020, it can be observed that a total of 371503 crimes (IPC + SLL) against women were reported in 2020 across all states and union territories. In India, the states reported 357363 incidences of crime against women, and the union territories reported 14140 incidents. In India, states account for 96.19% of all crimes against women, but union territories account for just 3.80% of such crimes.

2) *Top States/UTs discuss crimes against women, including instances and percentages, from 2018 to 2020.*

According to the table below, Uttar Pradesh leads India in terms of crime against women. In 2018 there were 59445 events reported; in 2019 there were 59853; and in 2020 there were 49385. It makes up 13.2% of all crimes against women in India. (State/UT Share of Percentage to All India, 2018)

Table 2-Top States/UTs wise crime against women 2018-2020

Figure 2-Top States/UTs wise crime against women 2018-2020

Rajasthan is third in terms of crime against women, contributing 9.29% of all crimes targeting the state's female population and union territories to All-India-2020. With 8.60%, 7.09%, and 6.90% of State and union territories share to all of India in 2020, respectively, Maharashtra, Assam, and Madhya Pradesh rank fourth, fifth, and sixth in terms of the highest rates of crime against women. Delhi held the top spot among Union territories with the highest rate of crime against women in 2020, with 14140 recorded cases, or 3.80% of all States and UTs in All-India-2020. Between 2018 and 2020, there was a rise in crime against women in the several states, according to analysis of the above table. In the top spot, Uttar Pradesh saw a decline of almost 10,060 incidences between 2018 and 2020. Additionally, from 2018 to 2020, the number of cases decreased in Delhi (UT), Madhya Pradesh, Uttar Pradesh, Assam, and Maharashtra. The states where these instances are increasing or staying consistent are just West Bengal and Rajasthan.

3) India's Crime Types Against Women

The present study has examined solely seven categories of crimes against women, namely: dowry deaths, acid attacks and attempts to perform acid attacks, kidnapping, sexual harassment, abduction of women for forced marriage, rape, and attempted rape.

Crime Heads	2018	2019
Dowry Deaths	2018.0	2019.0

Table 3 Information from cases filed in India under the IPCs (Crime Head-wise) – (2018-2020)

Figure 3: Crime Head-wise – (2018-2020)

The combined sum of all crimes against women reported in 2020 is 14.08%. The statistics from 2018 to 2020 is represented by these crime heads. The aforementioned table indicates that 7166, 7115, and 6966 incidents pertaining to dowry fatalities were reported in 2018, 2019, and 2020, respectively. Additionally, in 2020, there were 105 and 33 cases pertaining to acid attacks, respectively. Cybercrime-related crimes in 2020 roughly mirrored those in 2019, yet in 2018, 1244, 2019–1621, and 2020–2334 occurrences were recorded. The number of crimes, kidnappings, and kidnappings of women for marriage-compulsion rose between 2019 and 2020. In 2019, there were 15615 events reported; in 2020, there were 11104 incidents, or almost 28% fewer than in 2018. Rape-related events and attempted rape incidents were reported as 28046 and 3741 in 2018, respectively. In 2020, there were fewer rape incidents than the year before. Furthermore, attempts to commit rape incidents were roughly equal in 2020 and 2019.

4) State/UTs wise representation of crime against women in 2020

This section lists the top states and union territories in India where crimes against women have occurred. According to the NCRB-Report, the percentage of incidences of various forms of violence experienced by women in 2020 is shown in this section.

Dowry deaths

Figure 3: Dowry deaths incidents percentage share in India 2020

In 2020, 6966 instances of dowry deaths were reported. Furthermore, as the accompanying table and pie chart demonstrate, Uttar Pradesh, Bihar, Madhya Pradesh, and the UTs (Delhi) together account for 37.00% of all dowry death incidents worldwide, while the remaining states and UTs only share 63.00% of these incidents.

5) Acid Attack

In India, women are the targets of brutal assaults with acid. The Indian Penal Code, Section 326A, applies to this offence. The top states and UTs that reported the most and zero events in 2020 are shown in the table below.

There have been 105 Acid Attack-related events registered nationwide (102 from states and 3 from UTs). With 29 instances, West Bengal led the list, followed by Uttar Pradesh (21) and Odisha (6), Karnataka (5), Madhya Pradesh (5), and Odisha (21). There were three cases reported in the UTs, and they are solely reported in Delhi and Chandigarh. There have been no reports of acid attacks from other UTs. No acid assaults were reported in 14 states.

	Crime Heads	Acid attack, sec.326A IPC	Percentage
0	West Bengal	29.0	27
1	Uttar Pradesh	21.0	20
2	Odisha	6.0	5
3	Karnataka	5.0	4
4	Madhya Pradesh	5.0	4
5	14-states	0.0	0
6	Delhi	2.0	2
7	Other States	39.0	37
8	(36 States and UTs=28+8)	NaN	100

Table 4: Acid Attack, (Crime Head-wise & States/UT-wise) - 2020

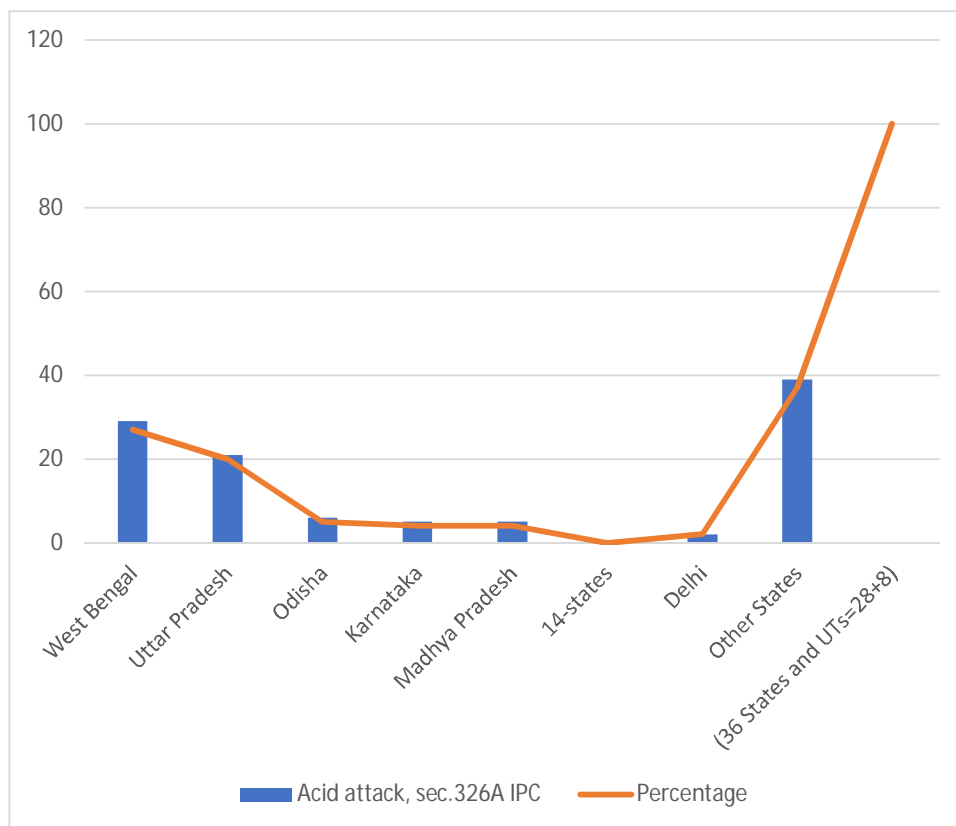

Figure 4: Acid Attack 2020

6) Abductions and Kidnappings in India

According to the NCRB Report-2020, there were 84,805 recorded cases of kidnapping and abduction in 2020, which is a 14.40% decline from 1,05,36 cases in 2019. In 2020, 84805 kidnapped or abducted individuals were found; 84727 of them were rescued alive, while 78 were found dead.

7) *Kidnapping and Abduction Women*

The table below, which breaks down events by State and Union Territory, displays the percentage of national incidents involving the kidnapping and abduction of women in order to force them into marriage. Uttar Pradesh (2930) has the highest percentage of incidences (26%), followed by Bihar (2688) (24%), Punjab (969) (8%), and Madhya Pradesh (943), (8%).

	State/UTs	Number of Incidents	Percentage
0	Uttar Pradesh	2930	0.26
1	Bihar	2688	0.24
2	Panjab	969	0.08
3	Madhya Pradesh	943	0.08
4	West Bengal	647	0.05
5	Maharashtra	447	0.04
6	Rajasthan	398	0.03
7	UTs	36	0.03
8	Other States	2046	0.18
9	Total	11104	1.00

Table 5: Incidents of Kidnapping and Abduction of Women to compel her for marriage (Sec.366 IPC) States/UT-wise) in 2020

Figure 5: : Incidents of Kidnapping and Abduction of Women

In contrast, Madhya Pradesh, Rajasthan, and Punjab recorded 943, 398, and 969 incidences, or around 20% of all incidents, according to the above table. Less than 3% of all events recorded in UTs—Chandigarh, Delhi, Jammu & Kashmir—were reported in just 36 cases, or 19, 1, and 16 correspondingly[13-15]. Other states documented 2046 cases, or 18% of all cases of kidnapping and abduction of women for the purpose of forcing them into marriage in 2020.

8) *In India, rape is the most prevalent crime against women as of 2020.*

Such as rape, which is a type of sexual violence against women that is reportedly on the rise globally [16-20]. In their lifetime, one in five women will experience rape. Many rapes go unreported due to the trauma and stigma attached to them, as well as a lack of empathy for them [21-22].

Figure 6: Rape incidents states & UTs wise in number

The National Crime Records Bureau annual report for 2020, number 28046, states that there were reports of rape crimes all over India in 2020. With 5310 rape cases among the Indian states, Rajasthan recorded the most incidences (5310 total). By contrast, Madhya Pradesh records the third-highest number of events, with 2339, after Uttar Pradesh (2769 cases), Maharashtra (2061), Assam (1657), Haryana (1373), and Jharkhand (1321).

V. CONCLUSION

These kinds of studies frequently leave us wondering more about what they might indicate about the crime against women. Given the diversity of the issue and the simultaneous occurrence of both positive and negative reactions, it is obvious that a brief response would not be warranted. However, the reality is that women still face violence and discrimination at different stages of their life, just as they did in the past. Designing mechanisms to deal with the problem of violence against women will begin with an understanding of the conceptual and theoretical underpinnings of the crime, the severity of the observation of the crime, and the causes and repercussions of crimes against women. Development strategies are necessary to persuade women that they are not worthy of being subjected to harsh treatment or that any form of violence against them is unacceptable. It is claimed that a number of stakeholders, including civil society, state institutions, and other national and international legal bodies, will need to get involved that reduce the horrifying toll of offences directed towards females.
