Phytochemical Estimation of Ethno- Medicinal plant of *Asparagus racemosus* willd. of Dang area of Dholpur District, Rajasthan (India).

Dr. Manoj Kumar Meena

Assistant Professor, Department of Botany, M.S.J. Govt. P.G. College, Bharatpur, Rajasthan (India)

Abstract: The present work was undertaken to analysis of the phytochemical compounds present in the root, fruit and bark of ethnomedicinal plant of *Asparagus racemosus* willd. belonging to Liliaceae family in dang area of Dholpur district of Rajasthan. Ethnomedicinal plants have bioactive compounds such as alkaloids, flavonoids, steroids and phenols which are used to curative various human ailments and also play an important role in healing.

Keywords: Alkaloids, Analysis, Bioactive, Ethnomedicinal, Phytochemicals.

I. INTRODUCTION

The ethnomedicinal plants are useful for therapeutic as well as for curing of human diseases because of the existence of phytochemical compounds. Phytochemicals are naturally stirring in the medicinal plants, leaves, vegetables and roots that have protection mechanism and protect from various diseases. Mainly phytochemicals are two types - primary and secondary compounds. Chlorophyll, proteins and common sugars are incorporated in primary constituents and secondary compounds have terpenoid, alkaloids and phenolic compounds. Terpenoids show confirmation of various vital pharmacological activities i.e. anti-inflammatory, anticancer, anti-malarial, inhibition of cholesterol synthesis, anti-viral and anti-bacterial activities. Alkaloids used as anesthetic agents are found in medicinal plants. Plant chemicals are regarded as secondary metabolites because the plants that manufacture them may have little need for them. They are synthesized in all parts of the plant body like bark, leaves, stem, root, flower, fruits, seeds etc. Currently, the global demand of herbal medicines is increasing rapidly because of their higher safety margin and low cost. The current study exposed the qualitative phytochemistry of medicinal plant used by the peoples of Dholpur district, Rajasthan in curing dreadful ailments of human on one hand and cattle on the other hand.

II. STUDY AREA

Dang area is one of the most resource dispossessed and arid region of Rajasthan state marked with degraded ravines, barren land and severe water shortage. Dholpur district with an area of 3034 square kilometers is located in eastern most extremity of the state of Rajasthan and lies between latitudes 22o21'19" and 26o57'33" North and longitude 77o13'06" and 78o16'45" East.

Fig. Map of Dholpur District of Rajasthan (Source: Atlas of Rajasthan)

III. MATERIAL AND METHODS

A. Gathering of Plant Materials

Plant materials roots were collected from dang area of Dholpur, District, Rajasthan, India.

- 1) The plant life was identified by villagers of tribal local communities about various aspects.
- 2) Interviewing with regular people to know about ethnomedicine and plants used for treating diseases in cattle.

Fig. Agencies for collecting information about Ethnomedicinal and Ethnoveterinary Plant *Asparagus racemosus* used in tribal medicine

Fig. Asparagus racemosus roots

B. Preparation of plant extract

Collected plant material roots were washed with distilled water and shade dried for a week. The dried sample were manually ground to fine powder using pulverizer and passed through 40 mesh sieve and stored in air tight containers. The plant powder was taken in a test tube and distilled water was added to it such that plant powder saturated in it and shaken well. The solution was then filtered with the help of filter paper and filtered extract of the plant samples were taken and used for further phytochemical analysis.

- 1) Flavonoids Shinoda's test: 1ml of herbal extract was treated with few Mg turnings and a few drops of conc. HCl. Formation of pink / green color indicated the presence of flavonoids.
- 2) Dragendroff's test for Alkaloids: 2 ml of HCl was added to 0.5 ml of herbal extract followed by 1 ml of reagent. An orange red precipitate formation indicates the presence of alkaloids.
- 3) FeCl_3 test for Tannins: Few drops of FeCl_3 solution were added to 1ml of herbal extract. configuration of blue or green color indicated the presence of tannins.

IV. RESULT AND DISCUSSION

Fig. Interactions with different tribal communities of Dang area of Dholpur Rajasthan.

Asparagus Racemosus Willd

Fig. *Asparagus racemosus*

A. Medicinal Properties

Asparagus racemosus is used as herbal drug according to information of local people of dang region of Dholpur district. *A. racemosus* supplementation and its effect on digestion, udder, milk production and energy metabolism, reproductive health, blood metabolites and immune system of dairy cows. The tribals used powder of this plant root mainly for galactagogue. In addition this plant is also recommended by local people for dyspepsia, curing of peptic ulcers, certain infectious disorders, nervous system diseases, diarrhoea, inflammation and liver problem. It has important use to augment immunity against pathogens like fungi, helminthes, protozoa, virus and bacteria. For joint stiffness, it is highly used. Its root is effective for antispasmodic, aphrodisiac, demulcent, diuretic and refrigerant. Combination of its root has more application for instance boiling of root with rice bran oil can inhibit several skin problems and with milk, it is used with Shatavari that is a crucial herbal drug in ayurveda to prevent women problems such as fertility. Its rhizome part is applied as soothing tonic, which has efficacy to respiratory system, circulatory system, female reproductive organs and digestive system. *Asparagus racemosus* is utilized for threatened miscarriage, loss of libido, stomach ulcer, hyperacidity, bronchial infection and menopausal problems. Application of whole plant has given more positive results to cure rheumatism, brain complaints and diabetes milletus, as well as management of behavioral disorder and minimal brain dysfunction.

B. Phytochemical Analysis

Some phytochemical compounds such as flavonoids, alkaloids, steroids, tannins, and phenol were analyzed from *Asparagus racemosus* roots.

C. Flavonoids

Phytochemical screening of flavonoid present in selected plant with standard showed various medicinally active constituents . In *Asparagus racemosus* there were two fractions FR II and FR III in which brown color with 0.87R_f value in FR II and bright grey with 0.26R_f value in FR III was observed, compounds found in qualitative analysis of *Asparagus racemosus* root was kaempferol and rutin.

Table-13 Chromatographic and physico-chemical characteristics of isolated flavonoids from root of *Asparagus racemosus*

Isolated compounds	R _f value	Physical appearance			Color after spray
	S ₁	Daylight	Ammonia	I ₂ Vapor	R ₁
					Visible
Kaempferol	0.87	Green-Yellow	Bright-Yellow	Yellow- Brown	Brown
Rutin	0.26	Green-Yellow	Yellow	Yellow- Brown	Bright-Grey

Abbreviations: S₁ – Benzene: acetic acid: water (125: 72: 3), R₁ – 5% FeCl₃ solution.

D. Alkaloids

In the present study, alkaloids extracts was applied on TLC plates separately and compared their color and R_f values with standards. Alkaloid estimation showed one spot of brick red color in FR II and FR III fractions and found that they were nearby values to R_f value of trigonelline compound.

Table- Chromatographic and Physico-chemical characteristics of isolated trigonelline

Isolated compounds	R _f value	In UV	Color after spraying and heating
	S ₁	R ₁	R ₂
Trigonelline	0.11	BT-BL	BK-RD

Abbreviations: S - Butanol:Acetone:Water (4:1:5), R₁-In UV, R₂-Dragendroff's reagent, BT - Bright, BL – Blue, BK- Brick, RD- Red.

Fig. Chromatographic and physico-chemical characteristics of isolated alkaloid from *A. racemosus*

E. Steroid

TLC analysis of sterioids in *Asparagus racemosus* root parts part observed two spots with the R_f value of FR III having 0.61, the compound found there was diosgenin and tigogenin. It was found that the R_f value of *Asparagus racemosus* root were close to tigogenin compound.

Table- Chromatographic and Physico-chemical characteristics of isolated Steroid from *Asparagus racemosus* roots

Isolated Compound	In UV	R _f Value	Color After Spray
		S ₁	R ₁
Tigogenin	BL	0.50	Orange

Abbreviations: S₁-Chloroform:Hexane:Acetone (23:5:2), R₁- 50% H₂SO₄, BL- Blue, BR- Bright, GN- Green.s

1) Tannin content- The tannin content in *Asparagus racemosus* roots was found 393.4µg/g.

Fig. Standard curve of Tannin

2) Phenol content- In *Asparagus racemosus* roots 123.98µg/g phenol content was recognized.

Fig. Standard curve of phenol

3) Antioxidant activity- The results from phytochemical screening indicated that *Asparagus racemosus* contain bioactive compounds such as tannin, carbohydrate, phenol and flavonoids all these bioactive compounds are responsible to exhibit medicinal values of plants such as antioxidant activity. Patel et al., 2011 examined various solvent fractions of *Asparagus racemosu* root part and reported the total phenol content and scavenging activity. Patel et al., 2011 examined various solvent fractions of *Asparagus racemosus* root part and reported the total phenol content and scavenging activity

4) DPPH activity- From the outcome it was evident that the plant showed good antioxidant activity with dose depended manner. Accordingly antioxidant activity was directly proportional to concentration of plant sample. The root part of *Asparagus racemosus* showed 12.5% DPPH scavenging activity at 10µl concentration that was increased up to 87.08% at 100µl concentration. *Asparagus racemosus* displayed maximum DPPH inhibition activity with respect to other medicinal plants

Table- DPPH activity of *Asparagus racemosus*: roots

Sample Concentration	% DPPH inhibition activity
10µl	12.5±1.01
20µl	27.5±2.48
30µl	43.3±1.79
40µl	46.8±0.37
50µl	55.6±3.15
60µl	58.35±4.63
70µl	60.63±0.65
80µl	73.92±3.80
90µl	76.83±5.48
100µl	87.08±4.13

Fig. DPPH activity of *Asparagus racemosus* root

The current study was undertaken to estimate the phytochemical compounds present in the roots of medicinal plant of *Asparagus racemosus* in Dang area of Dholpur district. Following investigations of extracts from *Asparagus racemosus* showed the occurrence of diosgenin and β -sitosterol. In the study Diosgenin and Tigogenin with green and orange color spots were found from *Asparagus racemosus*. Extracts were organized as of aqueous and organic solvent like Petroleum ether, Chloroform, Ethyl acetate and Ethanol. Remedial plants have bioactive compounds which are used for remedial various human ailments and also play a vital role in healing. Analysis of the plants was performed using customary methods and resulted in the exposure of the presence of tannins, flavonoids, phenolics, saponins, steroids, and alkaloids.

It is expected that the important phytochemical properties acknowledged in the present study in the indigenous medicinal plants of Dang area of Dholpur will be positively helpful in the curing of different diseases of the region.

V. CONCLUSION

The phytochemical study of *Asparagus racemosus* will reveal valuable information about the chemicals present in the root parts of the plant. Plants also have bioactive components which have medicinal properties (Shakya, 2016). The various chemical tests showed the presence of Flavonoids, alkaloids, steroids, terpenoids and carbohydrates.

VI. ACKNOWLEDGEMENT

I would like to express my sincere gratitude to M.S.J. Govt. College for their unwavering support and provision of resources throughout the course of this research. and mentorship provided by Dr. Sanjay Kumar sir. Their constructive feedback and insightful suggestions played a important role in my research paper.

Conflict of Interest – The author declare that is there is no conflict of interest.
